Height: 4 feet

Spread: 6 feet

Spacing: 4 feet

Sunlight:

Hardiness Zone: 4b

Other Names: Rose Mallow, Hardy Hibiscus

Description:

Showy, huge, lightly ruffled white flowers with deep scarlet eyes really make a bold statement opening above attractive dark bronze-green leaves; flowers are produced from the top to the bottom of the plant; do not allow to dry to wilting point

Ornamental Features

Mocha Moon Hibiscus features bold white round flowers with scarlet eyes at the ends of the stems from mid summer to early fall. Its glossy pointy leaves remain dark green in color with hints of coppery-bronze throughout the season. The brick red stems can be quite attractive.

Landscape Attributes

Mocha Moon Hibiscus is an herbaceous perennial with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting butterflies and hummingbirds to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects
- Self-Seeding

Mocha Moon Hibiscus is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Naturalizing And Woodland Gardens

Planting & Growing

Mocha Moon Hibiscus will grow to be about 4 feet tall at maturity, with a spread of 6 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 4 feet apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
