Plant Height: 8 inches

Flower Height: 12 inches

Spread: 10 inches

Spacing: 8 inches

Sunlight: ○ ◐

Hardiness Zone: 4a

Group/Class: Lupini Series

Description:

A lovely compact lupine producing spikes of luminous yellow flowers; a tremendous visual impact massed in the garden, border plantings or in containers

Ornamental Features

Lupini Yellow Shades Lupine features bold spikes of yellow pea-like flowers rising above the foliage from late spring to early summer. The flowers are excellent for cutting. Its palmate leaves remain emerald green in color throughout the season.

Landscape Attributes

Lupini Yellow Shades Lupine is an herbaceous perennial with a rigidly upright and towering form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Self-Seeding

Lupini Yellow Shades Lupine is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Lupini Yellow Shades Lupine will grow to be about 8 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 10 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 8 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 3 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in clay soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.

Lupini Yellow Shades Lupine is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
