Height: 40 feet

Spread: 30 feet

Sunlight: ○

Hardiness Zone: 4a

Other Names: Hard Maple, Rock Maple

Description:

An excellent shade tree for fall colors ranging from burnt orange to fiery red; shapely and neat, a truly stately tree; high degree of drought tolerance, adaptable to soils, but dislikes air pollution and compaction

Ornamental Features

Crescendo Sugar Maple has dark green deciduous foliage on a tree with an oval habit of growth. The lobed leaves turn outstanding shades of yellow, orange and red in the fall.

Landscape Attributes

Crescendo Sugar Maple is a dense deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Crescendo Sugar Maple is recommended for the following landscape applications;

- Accent
- Shade

Planting & Growing

Crescendo Sugar Maple will grow to be about 40 feet tall at maturity, with a spread of 30 feet. It has a high canopy with a typical clearance of 6 feet from the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a slow rate, and under ideal conditions can be expected to live to a ripe old age of 100 years or more; think of this as a heritage tree for future generations!

This tree should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
