Height: 30 feet

Spread: 24 inches

Sunlight: ○ ◐

Hardiness Zone: 4b

Other Names: Trumpetcreeper

Description:

An extremely beautiful and vigorous vine that can grow tens of feet in a year; very showy red trumpet-shaped flowers bloom all summer, and deepen in color as they mature; does well in poor soils; extremely attractive to hummingbirds

Ornamental Features

Atomic Red Trumpetvine features bold clusters of scarlet trumpet-shaped flowers with orange overtones at the ends of the branches from early summer to early fall, which emerge from distinctive dark red flower buds. It has dark green deciduous foliage. The serrated pointy pinnately compound leaves turn yellow in fall.

Landscape Attributes

Atomic Red Trumpetvine is a dense multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance woody vine that will require regular care and upkeep, and can be pruned at anytime. It is a good choice for attracting birds and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering
- Invasive

Atomic Red Trumpetvine is recommended for the following landscape applications;

- Vertical Accent
- Hedges/Screening
- General Garden Use

Planting & Growing

Atomic Red Trumpetvine will grow to be about 30 feet tall at maturity, with a spread of 24 inches. As a climbing vine, it tends to be leggy near the base and should be underplanted with low-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This woody vine does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
