Plant Height: 24 inches

Flower Height: 4 feet

Spread: 3 feet

Sunlight: ○ ◐

Hardiness Zone: 2b

Other Names: English Rhubarb

Description:

Long, bright red leaf stems are sweet, juicy, and hold good flavor; very reliable and quick to establish; harvest throughout summer; only stems are edible, other plant parts are poisonous

Edible Qualities

Glaskin's Perpetual Rhubarb is a perennial that is typically grown for its edible qualities, although it does have ornamental merits as well. The large cherry red stalks are typically harvested when mature. The stalks have a sweet taste and a crisp texture.

The stalks are most often used in the following ways:

- Cooking
- Baking
- Preserves
- Canning
- Sauces

Features & Attributes

Glaskin's Perpetual Rhubarb features bold spikes of cherry red flowers rising above the foliage from early to mid summer, which emerge from distinctive chartreuse flower buds. Its enormous crinkled round leaves remain green in color throughout the season. The cherry red stems are very colorful and add to the overall interest of the plant.

This is an herbaceous perennial with a rigidly upright and towering form. Its wonderfully bold, coarse texture can be very effective in a balanced garden composition. This plant will require occasional maintenance and upkeep, and can be pruned at anytime. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Aside from its primary use as an edible, Glaskin's Perpetual Rhubarb is sutiable for the following landscape applications;

- Vertical Accent
- Mass Planting
- General Garden Use
- Orchard/Edible Landscaping

Planting & Growing

Glaskin's Perpetual Rhubarb will grow to be about 24 inches tall at maturity extending to 4 feet tall with the flowers, with a spread of 3 feet. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant is quite ornamental as well as edible, and is as much at home in a landscape or flower garden as it is in a designated edibles garden. It does best in full sun to partial shade. It is quite adaptable, prefering to grow in average to wet conditions, and will even tolerate some standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
