Plant Height: 12 inches

Flower Height: 24 inches

Spread: 24 inches

Sunlight: ◐ ●

Hardiness Zone: 4a

Other Names: Broadleaf Sedge, Seersucker Sedge

Description:

A wonderful, ornamental sedge, presenting wide, bright green leaves; showy flower spikes on purple stems rise up and float above low growing foliage; a great shade plant that will add texture to borders or beds

Ornamental Features

Plantain-leaved Sedge has masses of beautiful spikes of creamy white flowers with burgundy overtones rising above the foliage in mid spring, which are most effective when planted in groupings. Its attractive large glossy sword-like leaves remain green in color throughout the year.

Landscape Attributes

Plantain-leaved Sedge is a dense herbaceous evergreen perennial grass with a mounded form. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading
- Self-Seeding

Plantain-leaved Sedge is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover
- Naturalizing And Woodland Gardens
- Container Planting

Planting & Growing

Plantain-leaved Sedge will grow to be about 12 inches tall at maturity extending to 24 inches tall with the flowers, with a spread of 24 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in partial shade to shade. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This species is native to parts of North America. It can be propagated by division.

Plantain-leaved Sedge is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It can be used either as 'filler' or as a 'thriller' in the 'spiller-thriller-filler' container combination, depending on the height and form of the other plants used in the container planting. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
